

**Secure your business
with Managed XDR
for Workplace**

Powered by Microsoft 365 E5 security

The threat landscape is more treacherous than ever, and navigating it can lead to complexity that doesn't deliver the results you need.

Staying secure is getting harder

The way we work has changed, and the traditional network perimeter has disappeared. Companies must now cope with people, data and applications being anywhere, on any device.

As complexity increases, the bad guys are getting smarter. Ransomware is now a successful business model for a new breed of smart, deep-pocketed bad actors, and cyberattacks have become more sophisticated and industrialized.

The threat landscape is more treacherous than ever, and navigating it can lead to complexity that doesn't deliver the results you need. And if that isn't enough, it's difficult and costly to find and retain cybersecurity professionals who have the expertise to protect enterprises from this new generation of attacks.

Faced with this complex set of challenges, it's time to rethink your cybersecurity strategy — and DXC Technology is here to help.

Secure your business across the entire attack chain

DXC's Managed Extended Detection and Response (XDR) for Workplace protects across endpoints, identities, email and applications. Built on the Microsoft 365 Defender XDR platform, DXC's managed service includes integrated protection against sophisticated attacks and 24x7 investigation and remediation of issues by expert security analysts.

Managed XDR for Workplace includes access to a customer threat expert who provides advice and support, continuously tracking your security landscape and threat trends across Microsoft 365 and the Microsoft 365 Defender service. This includes providing recommendations specific to your environment to help you strengthen your security posture.

Managed XDR for Workplace uses automatic threat analysis across domains, building a complete picture of each attack in a single dashboard. With this clarity, our defenders can focus on critical threats, hunt for sophisticated breaches and stop attacks anywhere in the attack chain. DXC's managed service includes:

Identities. Microsoft Defender for Identity is a cloud-based solution for protecting on-premises and hybrid identities. Defender for Identity can proactively eliminate vulnerabilities and reactively detect live threats.

Endpoints. Microsoft Defender for Endpoint is an enterprise endpoint security platform designed to help enterprise networks prevent, detect, investigate and respond to advanced threats.

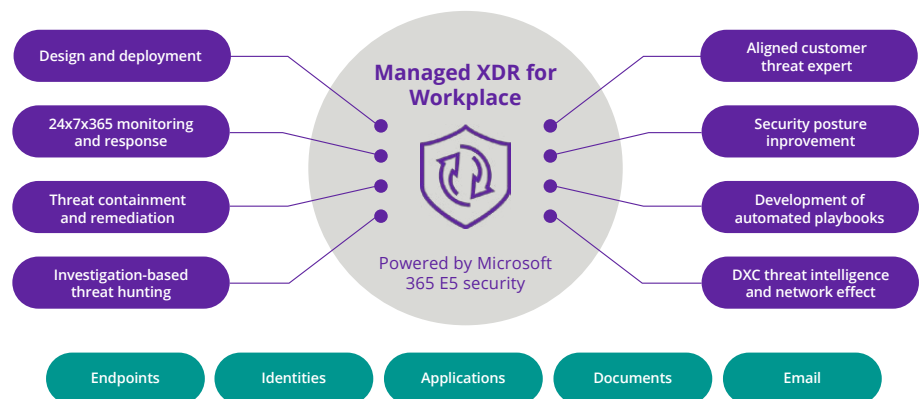

Applications. Microsoft Defender for Cloud Apps is a cloud access security broker that provides rich visibility, control over data travel, and sophisticated analytics to identify and combat cyberthreats across all your cloud services.

Email and documents. Microsoft Defender for Office 365 safeguards against malicious threats posed by email messages, links (URLs) and collaboration tools.

Key service features

- **Design and deployment.** The managed service includes design and deployment of Microsoft 365 Defender services tuned to your business: Defender for Identity, Defender for Endpoint, Defender for Cloud Apps and Defender for Office 365.
- **24x7x365 monitoring and response.** Our experts continuously monitor Microsoft 365 Defender incidents and alerts, providing triage, investigation and remediation for issues ranging from malware to sophisticated insider attacks. We don't just find the problems; we fix them.
- **Aligned customer threat expert.** Your threat expert provides recommendations and support for improving your security posture, as well as insights into incident and threat trends.
- **Threat containment and remediation.** With the full range of Microsoft 365 Defender services, our analysts work to remediate incidents and contain attacks across your workplace.
- **Security posture improvement.** A single, prioritized view of incidents reduces "noise," confusion and alert fatigue.
- **Auto-healing of affected assets.** Routine and complex remediation are taken care of. Threat detection, investigation and response occur automatically at the domain level within each Microsoft 365 security product, with the right playbooks and processes for your organization.
- **Investigative threat hunting.** Our analysts conduct intel- and incident-based searches across all Microsoft 365 data with custom queries, helping protect against emerging threats.
- **DXC threat intelligence and network effect.** Benefit from the vast network of threat insights DXC gains from providing security services for hundreds of global customers.

Benefits

Service options

Managed XDR for Workplace can be customized to suit your organization. We can work alongside your security operations center and integrate with your IT service management (ITSM) and security information and event management (SIEM) services. DXC can help you with advisory, design and implementation as well as full managed service capabilities. Service options include:

- **DXC Security Operations Center.** Our global 24x7 team of experienced security analysts uses integrated cloud-powered defenses to support open, multicloud environments, providing comprehensive cybersecurity protection, detection and response services.
- **Proactive threat hunting.** DXC analysts conduct deep hypothesis-based investigations across threat signals using modern tools to proactively identify new threats to your enterprise.

Why DXC?

DXC secures some of the world's largest companies. Our more than 3,000 security professionals around the globe are supported by nine security operations centers on five continents. Our scale and experience uniquely position us to help our customers secure their environments.

- Microsoft Solutions Partner — Security
- Member of Microsoft Intelligent Security Association
- Microsoft Managed Security Service Provider
- More than 23,000 Microsoft certifications across cloud, workplace, applications and security
