DXC Intelligent Asset Control for SAP

Enable intelligent and tightly controlled maintenance forecasting within your SAP solution.

DXC Intelligent Asset Control for SAP is a quick-to-implement forecasting solution for Asset Maintenance costs. Unlike standard SAP ERP functionality, our solution enables you to build forecasts that are aligned with your asset maintenance strategy to improve asset utilisation and to intelligently control operational costs.

Maintenance Planning Benefits

- Intuitive and designed to optimise the user experience

- Offers best practice SAP maintenance cost forecasting.

- Cloud solution, built using Cloud Application Programming (CAP) in the SAP Cloud Platform (SCP).

- Time-saving automation through the in-built, real time HANA database and Smart Data Integration (SDI) to deliver virtual tables which are queried to produce forecast summaries.

- Delivers a consistent, friendly and familiar user interface that won't disrupt your workflow by building on the SAPUI5 Framework and SAP User Experience guidelines.

- Deployment, maintenance and updates are easy with the well documented SAP Cloud Application Programming stack featuring popular and cutting-edge technology like Core Data Services (CDS) and OData.

Real-Time Forecasting Workflow
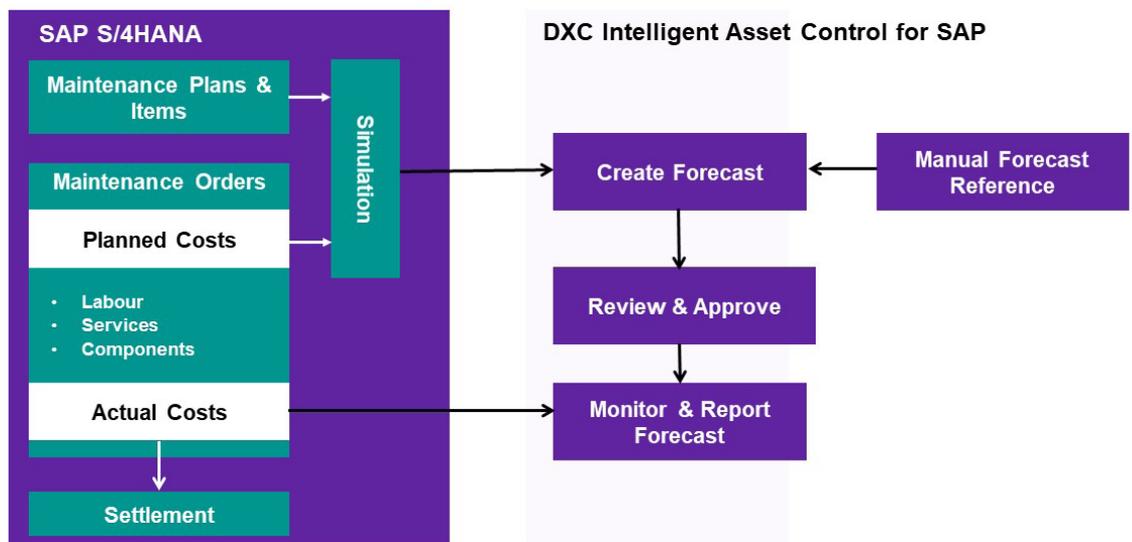

Functionality

DXC Intelligent Asset Control for SAP supports an effective maintenance forecasting process by providing accurate and real time planned and actual cost to enable data driven decision making.

Automate
The creation of a maintenance budget from SAP Enterprise Asset Management (EAM)

Forecast
Maintenance costs, materials, labour hours and external services forecast simply and easily

Simulate
Scenarios in real time

Compare
Forecast, budget and actuals
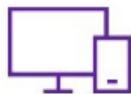

User Experience
New interface is available for quick and easy access to all transactions

Security

Intelligent Asset Control for SAP's robust security leverages the built-in authentication and authorisation features of the SAP Cloud Application Programming (CAP) Model. Your internal data is in the hands of SAP's enterprise-grade security model.

Logon and session management is handled by the SAP Cloud Platform powered by an identity provider of your selection – so no sensitive credential data is stored within Intelligent Asset Control, it is stored with your chosen identity provider – whether it be the default SAP ID Service or a personalised corporate implementation like Active Directory.

Out of the box, Intelligent Asset Management is expected to adhere to all of your existing security policies and standards as it introduces no new systems to handle the storage of sensitive data that isn't provisioned by SAP.
