

CSC's Global Oracle Practice

The Protected Enterprise

CSC is listed in the "leaders" quadrant of the Gartner report, Magic Quadrant for North American Enterprise Resource Planning (ERP) Service Providers, 2007. The report positions leading external service providers (ESPs) of ERP consulting and systems integration services based on their ability to execute and their completeness of vision.

In Brief:

CSC's experience, passion for results, innovative tri-modal staffing approach and understanding of the "Roadmap to Fusion" help you optimize your Oracle, PeopleSoft and Siebel investments — delivering increased value to your organization.

Competencies:

- Supply Chain Management
- Customer Relationship Management and Service
- Finance and Accounting
- Human Capital Management
- Business Intelligence
- Technical Architecture and Integration

Capabilities:

- Business Transformation
- Shared Services Integration
- Enterprise Systems Optimization
- Program Management
- Organizational Change
- Lab-based Upgrades
- Data Architecture
- Fusion Middleware
- Project Environment Hosting
- Production Hosting
- Remote Application Support

CSC and Oracle deliver security solutions based on Oracle's industry-leading identity management software offering clients world-class Identity and Access Management (IAM)

Security and compliance issues continue to grow rapidly in response to consumer and regulatory demands for the protection of sensitive electronic information.

Over 100 million identity-related security breaches have been reported since February 2005 according to the Ponemon Institute. A major U.S. retailer recently suffered damage to brand reputation and significant reconciliation costs due to the theft of compromising customer and credit card information. These headlines have heightened awareness and concerns regarding the management and access to sensitive information. Regulatory compliance requirements pressure business leaders to allocate additional resources to these non-core business activities, while demands for openness drive business partners, subcontractors, and customers to expect more access to systems and information.

The Solution

CSC is leveraging its proven capability to deliver and integrate security solutions and Oracle's industry-leading identity management software to offer clients a world-class Identity and Access Management solution. Powered by Oracle technologies, the IAM solution helps organizations meet today's security and compliance needs.

Oracle Identity Management provides a comprehensive, end-to-end identity and access management infrastructure solution that protects information, critical business systems, and applications against unauthorized access. The CSC Oracle Identity Management solution provides complete life cycle management of user identities and system access privileges to meet compliance and security requirements in response to the increasing demand to create and manage federated business relationships.

CSC and Oracle have developed a unique approach in working with our clients to create a strategy for identity management based on their business requirements. The Identity Management Insight enables an organization to create an enterprise roadmap based around CSC's Identity Management Maturity Model (IMMM) and Oracle's Identity Management Solution for Security and Compliance. This approach enables companies to define system requirements, develop strategies to manage digital identities, control access, and align requirements with Oracle's enabling capabilities.

CSC's Global Security Solutions Lab serves as its global hub for developing security solutions based on Oracle's technologies. Within this Lab, CSC and Oracle collaborate to create customized, repeatable security solutions based on specific customer needs across all industries.
